

## Provide - Equinor's e-catalog solution

Today Provide support more than 4,200 users, giving requisitioners access to over 1,120,000 materials and services sourced from a wide range of contracts and suppliers. In 2025, 53% of all material requisitions are processed through Provide - amounting to more than 12,000 requisitions each month.

Our mission is to provide seamless e-commerce solutions within our organization to revolutionize the internal shopping experience, enabling a data driven procurement process.

A key element of our collaboration is enabling suppliers to create and maintain an intuitive, user-friendly catalogue in Provide, with detailed product descriptions, and relevant specifications and images. It is essential that the catalogue is kept up to date, especially when introducing replacement products or adjusting prices, and that routines are established for quality control of the content.

User-friendliness plays a key role in the catalogue's design. Suppliers are expected to have accurate product descriptions and specifications accompanied by high-quality images, making it easy for requisitioners to find and order exactly what they need.

One of the main benefits for suppliers is increased visibility. Requisitioners can quickly and accurately find products and services that match your offerings, ensuring orders are placed with the correct supplier. This will result in a more efficient and streamlined procurement process. If you would like more information about Provide, please contact your contract handler at Equinor.
