Expectations to our suppliers

Climate: Expectations to Suppliers

Equinor intends to be a leading company in the energy transition and aims to reduce our greenhouse gas emissions by 50% by 2030 and achieve net zero by 2050. To be an effective agent of change in the energy transition, we must work closely with our suppliers to help society decarbonize. In 2023 we joined the [CDP Supply Chain Program](#) to enhance our engagement with the suppliers on decarbonization of our value chain, and we have established expectations to our suppliers:

- 1) Suppliers are expected to have net zero ambitions and near-term emissions reduction targets.
- 2) Suppliers are expected to disclose scope 1&2 emissions, and scope 3 emission estimates.
- 3) Suppliers are expected to engage with their suppliers on emission disclosure and net zero plans.
- 4) Suppliers are expected to report to CDP Supply Chain Program if requested from Equinor.
